IN THE CLAIMS

A "Clean" copy of the claim(s) as amended is presented below. A "Marked-Up" copy is appended to this response.

Please amend the claims as follows:

1. (Amended) A method for classifying and counting leukocytes comprising the steps of:
 - (1) adding to a hematological sample the following fluorescence-labeled antibodies labeled with fluorescent dyes which emit fluorescences distinguishable from each other;
 - (a) a first fluorescence-labeled antibody which binds specifically to leukocytes,
 - (b) a second fluorescence-labeled antibody which binds to at least one kind of neutrophilic cells, and *band + Segs*
 - (c) a third fluorescence-labeled antibody which binds to at least one kind of *(neutro, eos, baso)*
promyelo, myelo, metamyelo, band, seg
 - in order to stain the leucocytic cells in the hematological sample, and
 - removing erythrocytes from the hematological sample;
 - (2) analyzing the resulting hematological sample using a flow cytometer to measure at least one scattered light signal and three separate fluorescence signals;
 - (3) defining a group of granulocytic cells on the basis of intensity of the scattered light and intensity of fluorescence from the first fluorescence-labeled antibody;

(4) defining the neutrophilic cells in the defined group of granulocytic cells on the basis of the intensity of the fluorescence from the first fluorescence-labeled antibody and intensity of fluorescence from the second or third fluorescence-labeled antibody;

(5) classifying the defined group of the neutrophilic cells into groups of neutrophilic cells different in degree of maturity on the basis of the intensity of the fluorescence from the second fluorescence-labeled antibody and the intensity of the fluorescence from the third fluorescence-labeled antibody, and

counting the number of cells in each of the groups.

2. (Amended) The method according to claim 1, wherein in step (3), a group of all the leukocytic cells is defined and counted on the basis of the intensity of the scattered light and the intensity of the fluorescence from the first fluorescence-labeled antibody in addition to the group of granulocytic cells, and in step (5), the ratio of the number of the neutrophilic cells in each of the groups different in degree of maturity with respect to the number of all the leukocytic cells is calculated.

3. (Amended) The method according to claim 1, wherein the first fluorescence-labeled antibody comprises an anti-CD45 antibody.

4. (Amended) The method according to claim 1, wherein the second fluorescence-labeled antibody comprises an antibody selected from the group consisting of an anti-CD11b antibody, an anti-CD16 antibody, an anti-CD66b antibody and an anti-CD66c antibody, and the third

fluorescence-labeled antibody comprises an antibody selected from the same group but different from the antibody of the second fluorescence-labeled antibody.

5. (Amended) The method according to claim 1, wherein the second and third fluorescence-labeled antibodies comprises any combination of an anti-CD16 antibody with an anti-CD11b antibody, an anti-CD16 antibody with an anti-CD66b antibody, an anti-CD16 antibody with an anti-CD66c antibody, an anti-CD11b antibody with an anti-CD66b antibody, and an anti-CD11b antibody with an anti-CD66c antibody.
6. (Amended) The method according to claim 5, wherein the second and third fluorescence-labeled antibodies comprise the anti-CD16 antibody and the anti-CD11b antibody.
7. (Amended) The method according to claim 1, wherein the scattered light measured is side scattered light.
8. (Amended) The method according to claim 1, wherein the fluorescent dyes are selected from the group consisting of fluorescein isothiocyanate (FITC), phycoerythrin (PE), allophycocyanin (APC), Texas Red, PE-CY5 and peridinin chlorophyll protein (PerCP).
9. (Amended) The method according to claim 7, wherein the fluorescent dyes of the first, second and third fluorescence-labeled antibodies for emitting distinguishable fluorescences comprise a combination of FITC, PE and PE-CY5 or a combination of FITC, PE and PerCP.
